Each ml contains:
Dicyclomine Hydrochloride IP……..10 mg
Diclofenac Sodium IP……. 25 mg
Benzyl Alcohol IP……...4 %w/v
(As Preservative)
Water for Injection IP……...……q.s.

DESCRIPTION
Diclofenac Sodium and Dicyclomine Hydrochloride Injection comes under the branding DICLOCAN SPAS. It belongs to the drug known as nonsteroidal anti-inflammatory drug (NSAID) that is generally prescribed to relieve pain and discomfort that is linked to abdominal, renal colic, biliary colic, and other painful conditions where smooth muscle spasm is involved. Pain is characterized by an unpleasant sensory and emotional experience associated with actual or potential tissue damage, or described in terms of such damage.

DICLOCAN SPAS (Diclofenac Sodium and Dicyclomine Hydrochloride Injection) contain active ingredients Diclofenac Sodium & Dicyclomine Hydrochloride. Diclofenac Sodium works by inhibiting the production of prostaglandins, which are substances in the human body that cause pain and inflammation. Dicyclomine Hydrochloride is an antispasmodic medication that acts on the smooth muscles of the gastrointestinal tract to reduce spasms and relieve pain.

INDICATIONS AND USAGE
Relieves abdominal pain and cramps. Dicyclomine is an anticholinergic which works by relaxing the muscles in the stomach and gut (intestine). It stops sudden muscle contractions (spasms) thereby relieving cramps, pain, bloating, and discomfort. Diclofenac is a non-steroidal anti-inflammatory drug (NSAID) which works by blocking the release of certain chemical messengers that cause abdominal pain and inflammation (swelling)
